

— PHASE IV · PRESERVATION — A .LLAB™ FRAMEWORK

.LLab Infrastructure Blueprint™

Turn Diagnostic insights into an intentional, sequenced infrastructure-building plan across 90 days, six months, and a year.

PHASE	INVESTMENT
IV · Preservation	\$500

— BEFORE YOU BEGIN

Insight without **sequence** is just a list of worries.

A Diagnostic tells you where you're weak. It doesn't tell you what to do about it first, second, and eighth. Most organizations respond to a clear-eyed assessment by trying to fix everything simultaneously — which is functionally the same as fixing nothing, spread thin enough that none of it finishes.

The Blueprint is the discipline layer: it takes what you now know and turns it into a real plan, sequenced by what actually compounds, across three time horizons.

BEFORE YOU START

This framework assumes you've completed the **.LLab Leadership Infrastructure Diagnostic™**, or have an honest equivalent view of your strengths and gaps across all four phases. If not, start there — the Blueprint is only as good as the diagnosis feeding it.

How to use this framework

Work through the Impact vs. Effort matrix first — it forces prioritization before you touch a calendar. Then populate the three horizons. This isn't meant to be finished in one sitting; treat it as a living document you return to at each horizon's boundary.

Impact **vs.** Effort.

Every gap you found competes for the same scarce resource: attention. This matrix forces an honest ranking instead of chasing whatever feels most urgent this week.

QUADRANT	WHAT GOES HERE	WHAT TO DO WITH IT
High Impact, Low Effort	Quick wins — a single decision rule, a missing review meeting	Build first. These fund the credibility for harder work later.
High Impact, High Effort	Structural work — a real operating system, a succession plan	Sequence deliberately across the 6-month and 12-month horizons.
Low Impact, Low Effort	Minor fixes, nice-to-haves	Batch them; don't let them consume focus meant for the above.
Low Impact, High Effort	Ambitious projects that don't actually move the diagnostic score	Deprioritize openly, rather than letting them linger unfinished.

LIST YOUR TOP THREE FINDINGS FROM THE DIAGNOSTIC, AND PLACE EACH IN A QUADRANT ABOVE

Three horizons.

Sequence your highest-impact findings across time — quick wins first, structural work sustained across the year.

Next 90 days

ONE OR TWO QUICK WINS — HIGH IMPACT, LOW EFFORT

Next 6 months

THE STRUCTURAL BUILD THAT MATTERS MOST — LIKELY HIGH EFFORT, HIGH IMPACT

Next 12 months

WHAT PRESERVATION AND LEGACY WORK NEEDS TO BE UNDERWAY BY YEAR'S END

— CLOSING

A blueprint is only real once it's on a calendar.

The difference between this document and a strategy deck that gathers dust is ownership and dates. Before you close this workbook, assign both.

HORIZON	OWNER	REVIEW DATE
90 days		
6 months		
12 months		

A plan that never gets revisited is a plan that was never really adopted — only written down once and hoped for.

Where this fits

The Blueprint sequences the work. The **.LLab Legacy Infrastructure Architecture™** is the comprehensive framework for what you're building toward across all four phases — the complete system this blueprint is the roadmap into.
